Motivation

1 Reference drift
Entity references can switch between similar objects across reasoning steps.

2 Reasoning–answer misalignment
The final answer can point to a different entity from the one analyzed.

Key Insight: Persistent Identity

Same entity. Same ID. Different views.

Anchor = name + ID + view + point.

Keep identity stable across steps and viewpoints.

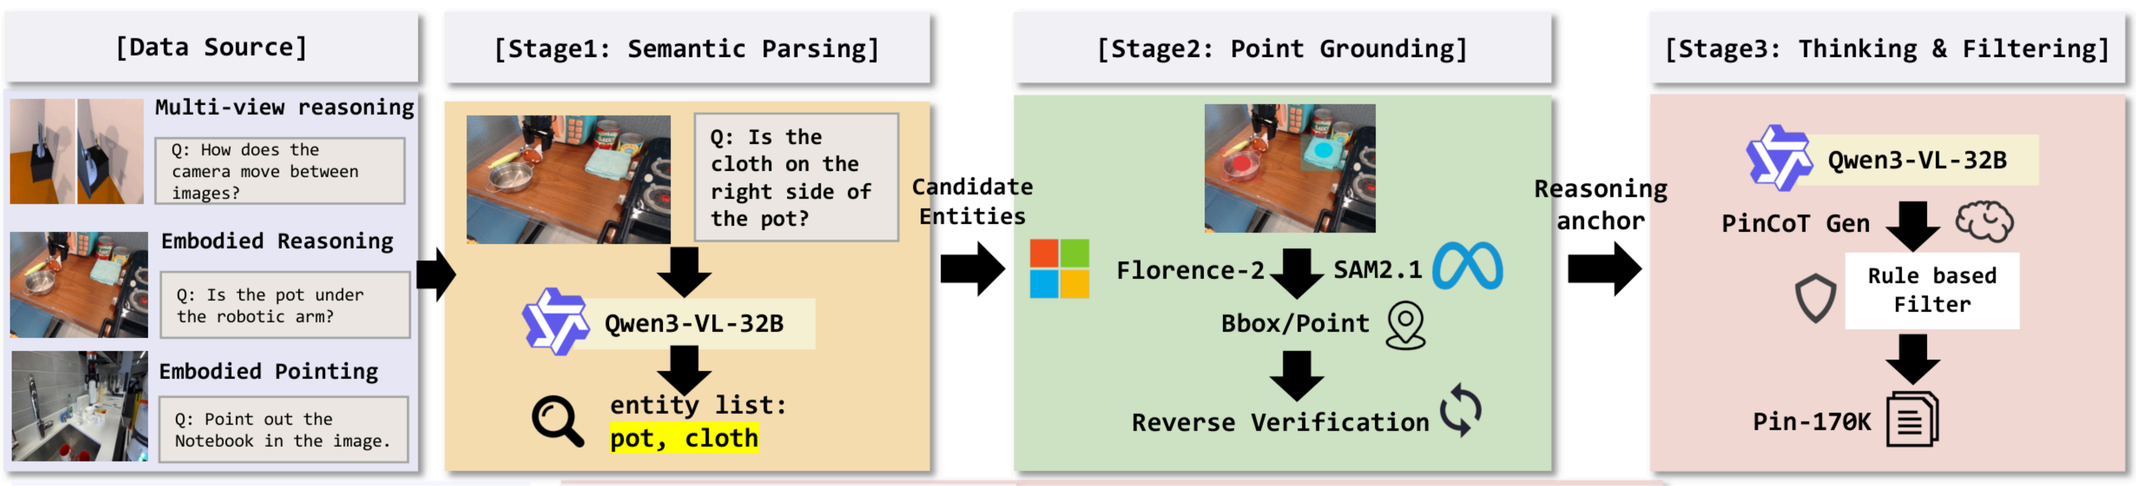

Our insight

Persistent IDs connect visual evidence, intermediate steps and the final answer.

PAPER / CODE

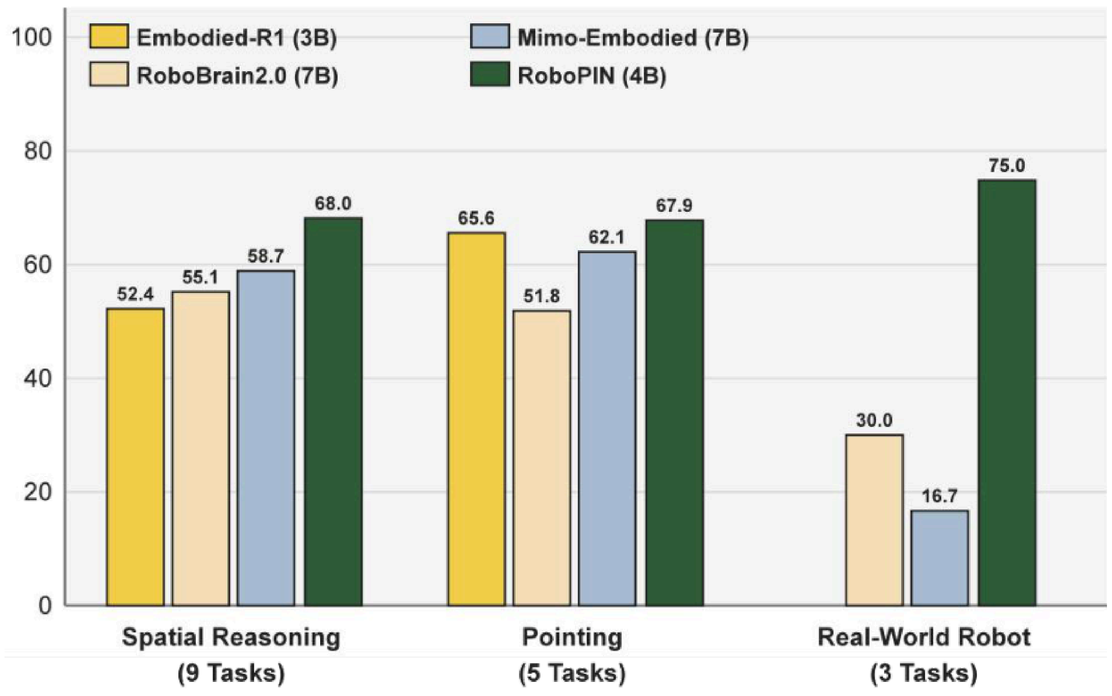

Our Method: RoboPIN / PinCoT

Three-stage post-training

SFT — Embodied knowledge → **CoT-SFT** — Structured reasoning → **RFT / GRPO** — Process alignment

Experimental Results

Ablation studies

Reward design

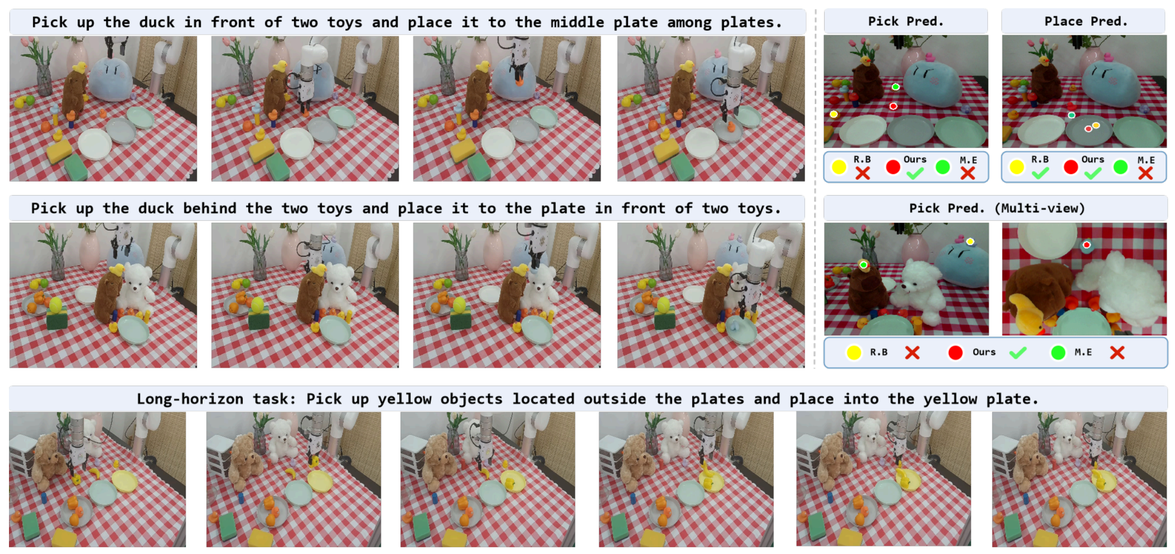

Setting	EmbSpatial
Full reward	**84.7**
w/o Pin	82.0
w/o Consistency	82.7

Training stages

Stage	Spatial	Point
SFT	57.0	66.0
+ CoT-SFT	62.0	63.6
+ RFT	**67.7**	**67.9**

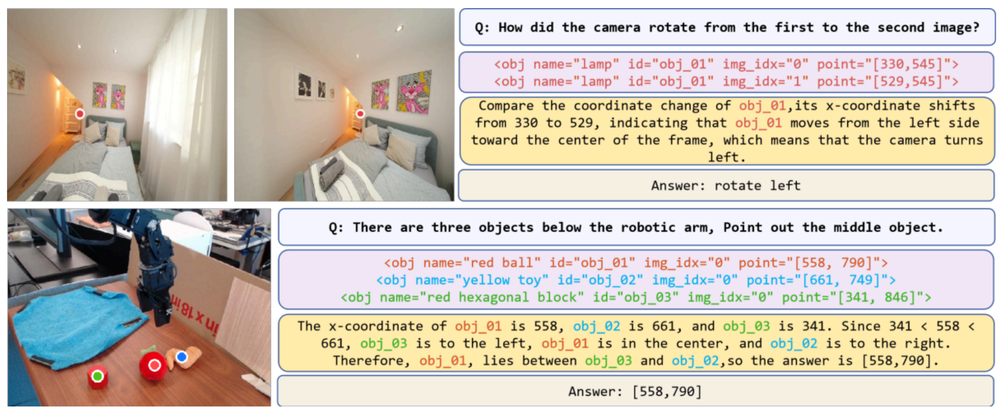

Spatial reasoning: +10.7 points from SFT to RFT.

Qualitative Results

Zero-shot xArm · successes / 20

20 / 20	14 / 20	11 / 20
Spatial	Multi-view	Long-horizon

Persistent visual anchors make embodied reasoning traceable.
